

Pairing Process for Android

Open the SolusGuard App and go to the Device tab.

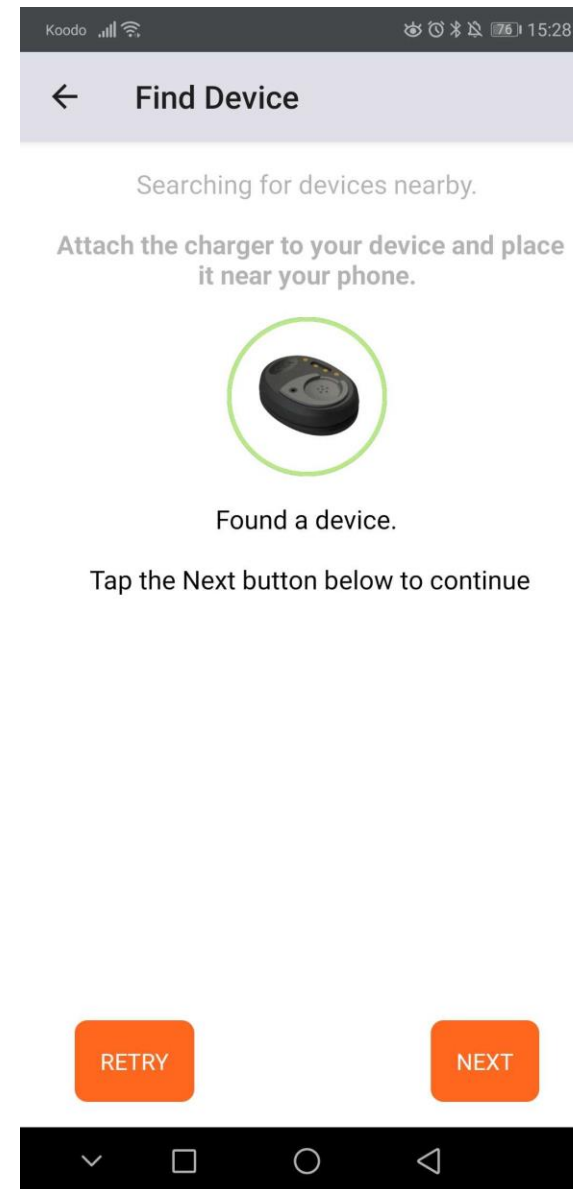

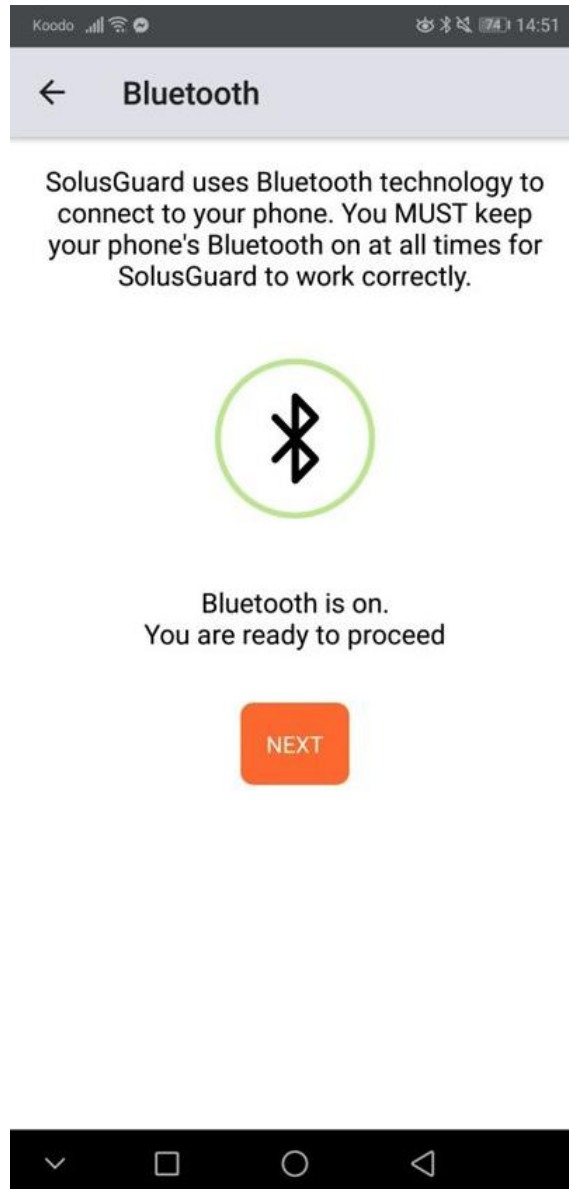

To start the pairing process, click "Start".

Attach your SolusGuard device to the charger and then click "Next".

The SolusGuard app will check your phone to make sure Bluetooth is turned on. If it is not, it will ask you if it can turn it on for you.

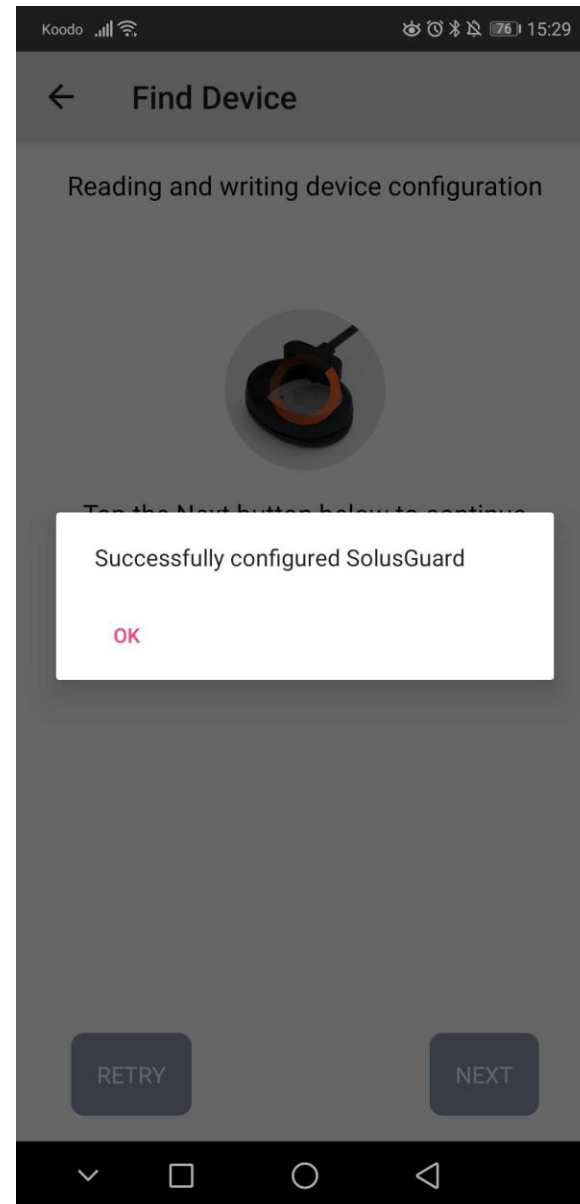

Once the app has confirmed that Bluetooth is on, click "Next".

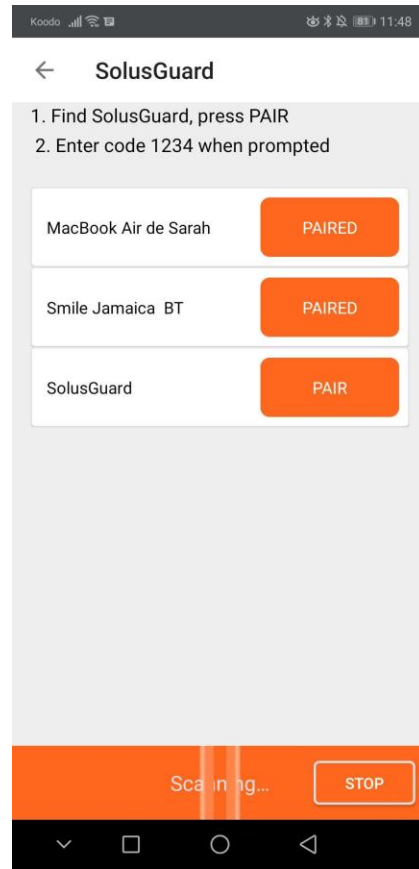

SolusGuard will now search for your device.

Once the device is found, click "Next".

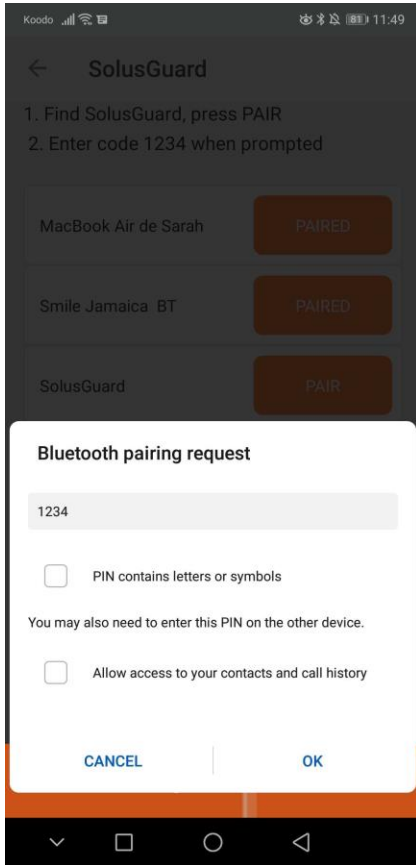

SolusGuard will then take a bit of time to configure your device. When that is complete you will see this pop up. Click "OK".

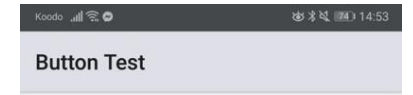

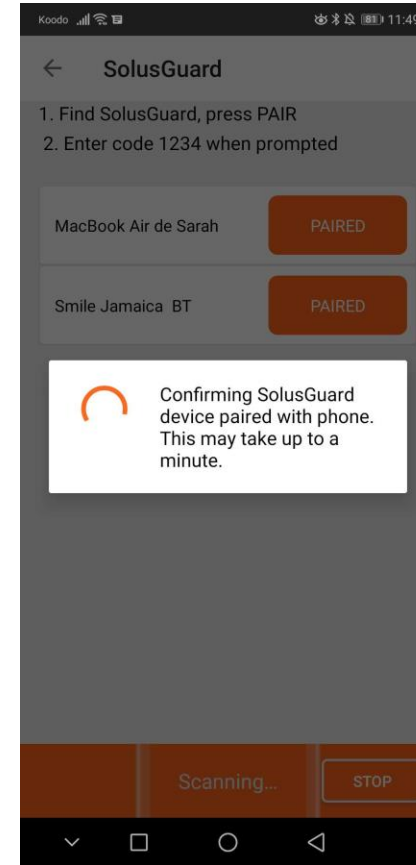

1) Bluetooth Pairing:
Click on "SolusGuard"

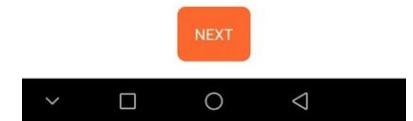

2) Enter the pairing pin, 1 2 3 4.
Then click OK.

3) This stage can take few
minutes.

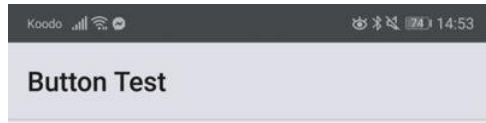

Just about done!

4) The app will confirm
that the pairing worked.
Click on "Next" when
the button is orange.

The next step is a test button push!

Press the button on your SolusGuard alert device.

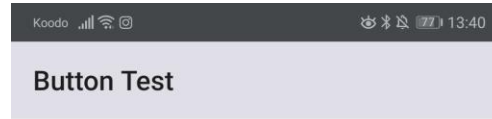

Press the button on the device.

This is just a test.

Waiting on button press

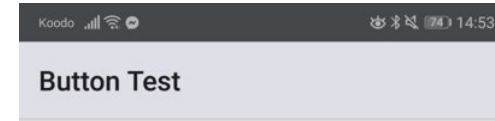

Press the button on the device.

This is just a test.

You pressed the button! Please wait while we configure the device.

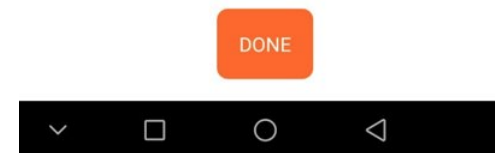

Press the button on the device.

This is just a test.

Great, your device is ready.

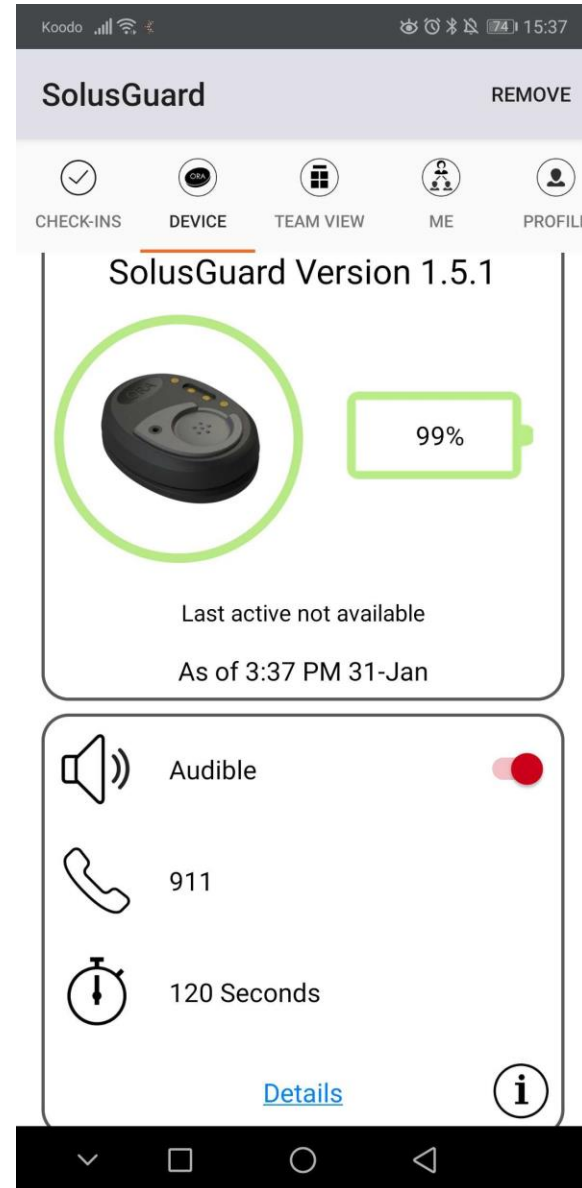

Once the button test is complete you are finished the pairing process and are ready to start using your device!

Click "Done".

This home screen tells you your current connection status, your devices battery percentage, and the last time your device moved.

It also has the "silent alarm" switch and lists your current alert parameters (the back-up phone number and the length of the countdown).
